**Ключевые слова:** всесторонне развитая личность, интеллектуальный потенциал, индивидуальность, способности, талант, независимое мышление, передовые технологии, глобальное пространство, президентские школы, креативность, развитие сообщества.

Raising the youth of our country as competent people in all respects is one of the priorities of state policy. Because only such young people can carry out the ambitious big plans. It is possible to build a new Uzbekistan with young people who have grass in their hearts, are enthusiastic, have ilmu potential. So many of our young people can hope for a bright future. Although the perfection of young people depends on such important aspects as physical, spiritual, scientific, intellectual, in particular, the inherent intellectual characteristics of each age are important in this. We know that intelligence is a person's mental ability, the ability to know the world, to act wisely, to anticipate events. It can also be said that the intellectual ability of each person is only unique is a miracle of the creator. It is true that, although intellectual ability is innate, the creation, cultivation, development of conditions for its occurrence is also considered one of the important functions of society. Wanting their children with a land future to come of age as mature people, the society strives diligently to create all the conditions necessary for their intellectual potential, talents and abilities to come true. President Sh. It is not for nothing that Mirziyoev said: "As long as we are firmly committed to building the great future of Uzbekistan, we should start this great work not tomorrow today, for which, first of all, we should create the necessary conditions for our needy youth exactly today.

In today's time, when the pace of development is growing, the struggle to find its place in the global space is in full swing, only young people with intellectual potential are more suitable for the country. Because independent thinking, deep mastery of modern knowledge, excellent mastery of advanced technologies, resistance to a fierce competitive environment only through creative abilities, it is possible to win this fight. Such features are inherent in talented young people with high intellectual potential. After all, "the nation lives at the expense of talents. Talent - national property. Any people Bloom, flourish, prosper at the expense of talents. The next day of the countries, whose talents are humiliated, will remain dark, under interrogation"<sup>1</sup>.

Therefore, in the first goal, it is necessary to identify talented young people in time, to create all the necessary conditions for them to bring their talents to the surface. Otherwise, many unique talents will die without going to the surface. This situation, unfortunately, has been a lot in the past, and now it is not uncommon. How many talents disappeared without a trace due to the indifference of those around them, the helplessness of parents, the lack of necessary conditions in general. This is a huge loss not only for the talented themselves, but also for their people, their homeland.

It is gratifying that today it is being tried not to allow this to happen as much as possible. In our country, it should be recognized that in the following years a number of necessary practical work has been done on the way to developing the intellectual potential of talented young people. Suppose the establishment of "presidential schools", "schools of creativity", designed to provide deep knowledge to talented young people, is evidence of our opinion.

We said that every young man-girl growing up would have different intellectual abilities, interests. Therefore, first of all, their abilities, interests are taken into account, incentives are the same. Only then can they fully manifest themselves, grow up to be mature masters of the sphere in which they are interested, and, as a result, make a worthy contribution to the development of the sphere, to the development of society. It is especially important to take care of its flames, preserving the spark of talent that flashed brightly from some side from various hurricane-force storms. Strictly speaking, the transformation of an opportunity into reality does not happen on its own, it requires the necessary conditions for this.

Raising the intellectual potential of young people depends on several aspects, let's dwell on the most important of them. In this, of course, it is advisable to note the role of knowledge in the first goal. It's no secret that now we live in the age of science. The development of the country, the living well-being of the population is based on the deep acquisition of modern knowledge, their implementation into life. Therefore, a

special approach is required for talented young people to acquire knowledge based on the requirements of the time. True, in subsequent years, the number of private and public schools teaching subjects in a deepened program for gifted students has increased significantly. This is a delightful case, of course. After all, the same approach to all, the same demand for all is destined not to justify itself.

One of the main indicators of the intellectual abilities of young people is manifested through their independent thinking. Only a person who can solve any problem based on his intellectual potential, knowledge, experience thinks independently. Only a person with his own independent opinion can contemplate. Only a thinking person can innovate something, create something. The more people creating this way, the more stable the development of society will be. The nation provides only the people who create the development of the country.

A person who can think independently will also have the ability to meditate philosophically. The philosophical worldview is the intellectual perception of the world and man. Unfortunately, at the moment, as a result of the lack of formation of a philosophical worldview, the ranks of young people are increasing, given to religious fanaticism, who do not have the skills of scientific-intellectual understanding of reality. Historically, it is known that the consequence of giving in to various superstitions will not be good. In the modern world, based on the development of Science and technology, it is impossible to go far, knowing mythological and religious visions, concepts. The struggle of the globalized world, based on cruel competition, is won only by those armed with the most modern knowledge.

Today, one of the most important of modern knowledge has become Information Communication Technologies. Although these technologies continue to assume that a person who does not know the secrets of mystery from Siri to Siri has lagged behind in time. What area we do not take today lies in information and communication technologies at the heart of its development. It can also be seen that the thorough acquisition of Information Communication Technologies and the effective use of its capabilities are also important in raising and demonstrating the intellectual potential of talented young people.

We live in a time when the process of globalization is gaining momentum and scientific, cultural, educational ties between peoples are gaining momentum. Uzbekistan has also become an active subject of international relations. In other words, Uzbekistan also turned to the world. Now it is a requirement of a new time for the youth of our country to have excellent knowledge of foreign languages, especially English, in finding a worthy place in the world in each area.

In the rise of the intellectual potential of each person, the fact that teran can follow the observation can only be achieved through tireless reading and promoting what he has read. The importance of the book is fully expressed in the opinion of the noble adibimiz Oybek: “the tolmas wings of thought are the book”. The role of the book in the maturation of young people, their formation as mature specialists is special. Because the Good Book of chindanam is a unique discovery, a great value that raises a person from the earth to the Blue, leads him to perfection, puts seeds of goodness in his heart, black with white, helps to mean the difference between goodness and evil.

As you can see, raising the intellectual potential of young people is becoming more relevant today than ever before. Because the future of any society is considered directly dependent on the intellectual potential of the growing generation, the conditions created today for its deep acquisition of modern knowledge. The fact that today in our country is trying to create all the possibilities for young people to receive a high level of knowledge, and most importantly, the height of the passion of talented young people for obtaining knowledge, is pleasing. Indeed, “you may have heard that our karakoats studying abroad exceeded 150,000. I am the most priceless asset of our nation, my state and my state, our young people who are hard working on the path of tomorrow's knowledge!”<sup>2</sup>
