

GLOBAL CLIMATE CHANGE

By *Ahmataliyeva Sabinabonu*
a 6th a-grade student of school number 22

Annotation: This article, written from the perspective of an 6th grade student from Uzbekistan, examines the current global warming problem, and discusses how human abuse of nature, if this condition continuous, can lead to greater problems.

Key words: replace, fuel, disastrous, release, peak , issue, flooding, celsius, lead and particularly.

“Global Iqlim o’zgarishi ”

22-sonli umumta’lim maktabining 6a-sinf o‘quvchisi

Izoh O‘zbekistonlik 6A- sinf o‘quvchisi nuqtai nazaridan yozilgan ushbu maqola shiddatli global isish va odamlarning tabiatga qanday tasir ko‘rsatayotgani, agar bu holat shunday davom etsa, katta muammolar kelib chiqishi haqida hikoya qilinadi..

Kalit so‘zlar:. yangirog‘iga almashtirmoq, yoqilg‘i, falokatli, ozod qilmoq, avjiga chiqish,muammo, suv toshqini,daraja, asosiy va ayniqsa.

“ GLOBAL CLIMATE CHANGE”

Global climate change is one of the most urgent problems that the world is currently looking for a solution to. We call it global warming for short. What is global warming? Global warming is a long-term warming of the overall temperature on the planet. Global warming power "gik" is how much of the "infrared thermal" radiation added to the atmosphere by greenhouse gases changes over a certain period of time. It causes global climate change in the world. there are a lot of factors. For example, we all know that there are many factories and plants in the world. What is the reason for this? Why does this cause this problem? there may also be questions like. Factories and factories can work constantly or very much. The toxic gas and fumes coming out of them cause the destruction of the ozone layer. We know that there used to be a small hole in the ozone layer. Currently, this is a problem that causes the hole to erode and enlarge, which is very bad because some of the sun's harmful rays can pass through this eroded shell. This can harm all factors in the world. It is clear that we need to find a solution to this problem. Global warming causes us a lot of problems in our life. For example, we know that there are huge glaciers in the Arctic Ocean. But later these large glaciers may melt. In addition, there is a high risk of water level rise, dust, storms and floods, loss of plants, increase of harmful gases, death of animals, and economic crises. So we cannot find a solution to this problem.

Why were there no such urgent problems in the past? the question may also arise. Before, there were few plants and factories, cars and other things. Cars run on gas and petrol. Even these produce toxic gases. People in ancient times. Not bogged down by phones and the like. On the contrary, they worked for them instead. Before, there were many trees and forests. Trees absorb carbon dioxide and give off oxygen, so we need more trees. Fact: Today, modern aircraft require eighty tons of oxygen to fly. In nature, this amount of oxygen can produce forty thousand hectares of forest. But nowadays people are cutting down the trees. Instead, we should plant more trees and not throw waste into the environment. Then I think the environment will not be harmed by humans. I think we can find a way to reduce global warming by solving problems like this.
